The Fund's objective is to achieve consistent and superior returns on capital. The Fund seeks to achieve this by investing in a portfolio of securities where exposure to the natural gas industry is a component of either their asset base or revenue stream, or both. Such exposure can be found in companies involved in exploration, production, transportation, processing and distribution activities, as well as in those providing field-services and equipment to the industry. The focus of the Fund is Russia and the CIS where a one-off transformation in the economics of the gas industry is taking place. This is the result of a progressive price liberalization which is seeing gas prices increase from low state-controlled levels to market prices which are several-fold higher.
